Schleusener, A.
REMARKS ON THE FREE-AIR GRAVITY (ANOMALY) MAP OF CENTRAL EUROPE. [1962] [22]p. 33 refs.
ACIC RR-59.
Order from CFS or SLA $2.60 62-25585-2

Trans. of [Akademie der Wissenschaften, Munich. Deutsche Geodätische Kommission. Veroffentlichungen. Reihe A] (West Germany) 1955, no. 10b, p. 37-48.

DESCRIPTORS: *Maps, *Geophysics, Gravity, Europe, Geological survey, *Gravity anomalies.

Free-air gravity maps compiled from the usual, measured, free [illegible] values which depend on the accidental position of an elevation point have no relation to isostasy. They have to be reduced to an average elevation (a common level surface) (Putnam, 1896, et al). In view of the dense survey network of Central Europe, other (Earth Sciences--Geology, TT, v. 9, no. 5) (over)

authors have also determined a representative value in Δg for each of four survey sheets (500 km²) from the average gravity values, from which they have then drawn isogams. The free-air anomaly and Bouguer anomaly of the Heidelberg Loch and the Neckar-Tauber anomaly are compared. The Bouguer isogams include the effect of all the disturbing masses below a reference surface (for example, sea level), while the average free-air isogams include the effect of all the masses below the average terrain elevation. Bouguer isogams are suited to provide data about unknown geological disturbing bodies and are used for economic geophysical purposes. Mean free-air isogams yield approximate data on the isostasy of an area without the need for cumbersome isostatic computations or arbitrary assumptions about the distribution of densities with depth. Schloemer, H.
THE USE OF X-RAY FLUORESCENCE ANALYSIS IN CEMENT CHEMISTRY. [1961] 16p. 3 refs.
Order from SLA $1.60 61-18712

Trans. of Zement-Kalk-Gips (West Germany) 1960, v. 13, no. 11, p. 522-530.

DESCRIPTORS: *Cements, Fluorescence, Construction Materials, *X-ray spectroscopy, Chemical analysis.

The method and nature of X-ray fluorescence analysis are described. In connection with the plotting of calibration curves the preliminary treatment of the samples of material is of importance. The shape of the calibration curve of two mixtures, viz., $CaCO_3$-MgO and $CaCO_3$-SiO_2, and the manner in which the latter is affected by the third component Al_2O_3, are discussed.
